

MICRO Monocular

The NVD MICRO Monocular is an ultra small, American Made, Generation III image intensified night vision device that truly brings the term "Pocketscope" into definition. Yet the MICRO is much more than just a pocketscope - it can also be head or helmet mounted, weapon mounted, or mounted to a camera.

The MICRO's small profile truly means that it will fit into a pocket for the ultimate night surveillance device, and its easily interchangeable CCTV objective lens means that when conditions warrant, a higher magnification objective can be used for longer range observation. The MICRO camera adapter (optional) also allows it to quickly and easily be attached to a camcorder or digital camera for recording night time pictures and videos.

The MICRO's ability to be attached to the standard AN/PVS-14 head and helmet mounts via the optional adapter, allows the MICRO to utilize all standard AN/PVS-14 and AN/PVS-7B head and helmet mounts, which is great for hands free night time navigation.

The MICRO can also be utilized with the optional AN/PVS-14 Weapon Mount as a night vision weapon sight when used behind collimated reflex type sights such as the ACOG, Aimpoint, or EO Tech sights.

The MICRO uses the highest quality US manufactured GEN III Image Intensifiers and comes with a FIVE Year Limited Warranty.

- Single 123 Battery Usage
- Five Year Limited Warranty
- IR Illuminator
- Easily Changeable CCTV Lens
- Camera Adaptable
